"Has anyone here have tried zithromax/Zpack/Azithromycin by pfizer for asthma treatment?"

Dr. Gerald Lee answered:

For severe asthma

Azithromycin has been shown not only to kill atypical bacteria which makes asthma worse, but also reduce inflammation. Small studies which examine the effect of azithromycin on improving asthma are conflicting. Therefore, the best use of azithromycin is for severe asthma patients who aren’t controlled on standard asthma therapies on a trial basis.

Dr. James Glauber and 2 others agree

My knees pop after running. There is no pain. Is this early arthritis?

Dr. David Hicks
Family Medicine

tendonitis

If they cause a problem after the running is is usually a residual inflammatory process not arthritis. Could simply be a tendonitis and could be shoes or gait. First try to make sure the surface you are running on is level. If on a street if you only run on the right side you right leg is on the down side run back on ie same side you were on so left is down, try
What is your experience using cyclosporine for bad, chronic hives?

Dr. Morris Westfried  
Dermatology  
Brooklyn NY 11228

Psoriasis

It is used for psoriasis, not hives. For hives the cause should be identified. If OTC antihistamines do. Or work, then oral antihistamines, Tagamet, or a combination can be used to suppress hives. For resistant cases, colchicine or methotrexate are used on occasion.
