• Longitudinal changes on the concepts of food allergy throughout three decades (past, present and future).

• How can early dietary exposure to food allergens interfere with sensitization and tolerance? Discussion of mechanisms.

• What is the relationship of food allergen sensitization and the expression of atopic dermatitis? Discussion on immunopathogenesis.

• Comparison of the efficacy and safety profiles of oral versus sublingual immunotherapy for food allergy. Future perspectives.

• Oral immunotherapy for food IgE-dependent anaphylaxis. State of the art of current research.

• Diagnosing and managing oral mite anaphylaxis (pancake anaphylaxis). Association with mite allergic asthma and/or rhinitis and hypersensitivity to aspirin and NSAIDS.
